## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Juan Carlos Marquez on 9/16/2009.

The abstract has three paragraphs so the abstract is amended to one paragraph. The abstract has been amended as follows:

There is a problem in that when the demand accuracy with respect to a semiconductor pattern dimension comes close to a resist molecule size with miniaturization, the device performance is deteriorated due to edge roughness of a resist pattern to exert a bad influence on the system performance. The present invention overcomes the problem by the procedure in which super-molecules which are small in dimension as compared with the conventional polymers are used as main components, the reaction number required for the change of molecule solubility is made constant and as large as possible, and an acid generator is made clathrate or combinatory n super molecules to make an acid catalyst concentration large. As a result, it is possible to form a pattern of molecular accuracy with high productivity even with respect to the pattern dimension less than 50 nm, thereby realizing the high performance system.

***REASONS FOR ALLOWANCE***

Claims 4-9, 17, 19, 22-24, 26, and 29-37 are allowed.

The following is an examiner's statement of reasons for allowance: Claim 4 is allowable because of the prior art, either singly or in combination, fails to anticipate or render obvious, the method, including step of transferring a hole pattern or a gate pattern to said photosensitive organic film, wherein a plurality of said polarity change reaction groups are provided on the periphery of said molecules not polymers and further changed from alkali solubility to alkali non-solubility by acid generated from said acid generation molecules; and wherein said molecules not polymers include, as main constituting elements, at least one of cyclodextrine, calixarane, dendrimer, fullerene, crown ether, androsteron, and silicon monomer-oligomer, or one of the induction elements thereof. These features in combination with the other elements of the claim are neither disclosed nor suggested by the prior art of record.

The following is an examiner's statement of reasons for allowance: Claim 9 is allowable because of the prior art, either singly or in combination, fails to anticipate or render obvious, the method, including step of transferring a hole pattern or a gate pattern to said photosensitive organic film, wherein a plurality of said polarity change reaction groups are provided on the periphery of said molecules not polymers and further changed from alkali non-solubility to alkali solubility by acid generated from said acid generation molecules, and wherein said molecules not polymers include

Art Unit: 2895

cyclodextrine moiety, fullerene moiety, and polyhedral oligomeric silsesquioxane moiety. These features in combination with the other elements of the claim are neither disclosed nor suggested by the prior art of record.

Claims 5-8 depend from claim 4 so they are allowable for the same reason.

The reason for allowance for claims 17, 19, 22-24, 26, and 29-37 were given in the previous office action filed on 3/31/2009.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
